NUMBER 30

## Predicts Ruin of Germany

### Two Die Following Car Accident

Staff Sergt. David Withers of Winnipeg, and a soldier friend are dead as a result of a car accident at Cope's corner about 10:30 Wednesday evening. There were no witnesses to the accident and exactly what happened has been pieced together from investigation.

The car, a right hand drive military vehicle was coming into town from the west and missed the turn at the Cope corner and apparently turned over and over, and came to rest against the west fence of P. W. Cope's farm. Damage to fenders was about the damage suffered by the car, it being a steel top one. The occupants were thrown violently around in the car and Withers, who was driving was so badly injured that he died soon after reaching the hospital his chin living until the next day, but never regaining consciousness. The other occupant of the car, Miss Daniels was not seriously injured, but is in hospital receiving treatment for her injuries.

The R.M.P. and Dr. J. S. Madill were soon on the ground and an ambulance was phoned for. Dr. Madill rendering what aid he could to the injured on the ground, as they were too badly hurt to be moved. An investigation is under way and it is likely an inquest will be held.

J. U. Alfred, who moved to Utah, a few years ago, was a business visitor here this past week looking after his interests.

D. B. Menzies, Sanitary Engineer of the Province of Alberta was a Raymond visitor Friday in connection with the Municipal Hospital site.

Returning from Lethbridge Thursday night, the car of J. Daniels left the highway near the H.R. Thomson farm in Welling. No one was seriously injured.

### Milk For Britain

Last month brought Halloween. The children would not be going out after apples, candy or peanuts this Halloween for this year they were going to gather in Milk for Britain tickets which three grades at the High School were selling. \$282. worth of tickets were turned over to us, with Grade 7, Grade 8 A and Grade 8 B each receiving their \$94.00 quota. Our aim was high— "A complete sell-out," and sales were brisk. By Friday, 4 p.m. before Halloween the sales read:

Grade VII \$72.54

Grade VIII A 72.61

Grade VIII B 61.61

By 4:30 Grade VII had managed to tie the winners at \$72.56 all.

When the final score was taken on Monday next after all money or tickets were in, the sales sheet read:

Grade VII \$74.61

Grade VIII A 74.51

Grade VIII B 69.72

Total \$218.84

The plucky little Grade VII class had made the win possible by reaching into their pockets to buy their last 50c. worth of tickets and thus nose out Grade VIII A by the value of one quart of milk for Britain. But we know it will make some boy or girl over there glad.

And so we in Grade VIII B wish to congratulate all who did so well and thank Mr. Brewerton for the fine entertainment we received at his theatre.

Signed VIII B

Raymond High School.

Robt. Spackman is reported as being gravely ill in an England Hospital with an attack of diphtheria. With his many friends in Raymond we wish him a speedy recovery. He is serving in the Canadian Army.

### Churchill Warns U. S. Provincial Cancer Clinics and Britain Face Greatest Sacrifices in 1944

London, Nov. 9—Prime Minister Churchill gravely proclaimed the "impending ruin" of Germany today, but with all the force of his leadership and language warned that in his belief the Nazis' defeat could not come before 1944.

He said solemnly that the campaigns of next year may surpass the tragedies of Waterloo and Gettysburg, that "unless some happy event occurs, on which we have no right to count 1944 will see the greatest sacrifice of the British and United States armies."

The valiant and brilliant Russian offensives have wrecked the German war machine and inflicted wounds "that may prove fatal," he declared.

The prime minister said the back of the Nazi submarine warfare has been broken, and that the devastating air war upon the Reich has "been one of the prime forces in the impending ruin of the Hitler regime."

In an address broadcast to the world, Mr. Churchill said: "I am myself proceeding on the assumption that the campaign of 1944 in Europe will be the most severe and most costly to the Allies yet fought."

"We must strain every nerve for a successful accomplishment. This is no time for relaxation."

Hitler still has 400 divisions, promises a desperate struggle, and "we cannot exclude the possibility of new forms of attack upon this island," Mr. Churchill warned in his address at the inaugural luncheon of the new lord mayor of London, Sir Frank Newson-Smith.

He repeated later in his address that "the year '44 will see the greatest sacrifice of life of the British and American armies."

"This year 1944 is also election year in the United States," Mr. Churchill said, "I am sure I speak for all those of both sides of the Atlantic when I say that I hope we can preserve that goodwill throughout the English speaking world and aid our armies."

Mr. Churchill again expressed hope for a meeting of himself, President Roosevelt and Premier Stalin of Russia.

In other high points of an address broadcast to the world Mr. Churchill:

Vowed his intention not to liquidate the British empire.

Stated bluntly that this "is no time for those who have practical war work to do to dream of a brave new world."

Of the Moscow conference Mr. Churchill said "we have all been cheered" and he looked forward to welcoming home Foreign Secretary Eden from his successful mission. He paid tribute to Cordell Hull, U. S. secretary of state, as "that gallant American eagle."

The Moscow accord "has had the effect of making our Russian friends feel as they never felt before that it is the heart felt wish of our British and American nations to fight the war out with them in loyal alliance and afterwards to work with them on the basis of mutual respect and comradeship in far-reaching and rebuilding of this distracted, tormented world."—Leth. Herald.

Details of the Cancer Treatment and Prevention Act regulations were outlined this week in a statement by Hon. Dr. W.W. Cross, Minister of Health, in connection with the importance of getting the information.

In releasing the statement the Minister stressed the importance of the public. Large number of the people of Alberta, he declared, are not aware of the free service offered them by the Province. It is imperative that early action be taken where cancer is suspected.

Summary of the Act by Dr. Cross is as follows:

His Honour the Lieutenant Governor, by and with the advice of the Executive Council, has been pleased to order (under authority of the Cancer Treatment and Prevention Act being Chapter 189 of the Revised Statutes of Alberta, 1942, that the following regulations be, and are hereby made and established:

(1) The function of each Cancer Diagnostic Clinic is to examine each patient and make a diagnosis as to whether the patient has cancer or not, and to decide what form of treatment, if any is to be recommended in the best interests of the patient.

(2) The staff of each clinic shall consist of:

(a) The director of Cancer Diagnostic Clinics.  
(b) A surgeon.  
(c) An internist.  
(d) A pathologist.  
(e) A radiologist.  
(f) A consulting specialist on call.

(3) The secretary of each clinic shall have charge of all histories, records and follow-up records of each case.

(4) Only those patients who are referred by their attending physicians as having, or who are suspected of having cancer, shall be admitted to the clinics.

(5) Application for admission to a clinic shall be made in writing to the clinic by the attending physician on forms supplied and approved by the Director of Cancer Diagnostic Clinics.

(6) Tissue examinations shall be made by a qualified pathologist of all tumours wherever possible, except in those cases in which obtaining tissues for such examinations is likely to be detrimental to the welfare of the patient.

(7) No fee shall be charged to any patient by the clinic for examination and diagnosis.

(8) The result of the examination shall be made known to the attending physician in writing.

(9) The patient shall remain in the clinic following the consultation with the Cancer Diagnostic Clinic.

(10) Certain days are specified for the holding of Cancer Diagnostic Clinics, the number of days depending on the number of patients requiring this service. Patients are required to present themselves at the clinic on the days specified.

(11) If a diagnosis of cancer is made, and in the opinion of the members of the Diagnostic Clinic staff, x-ray or radium treatment is considered the best form of treatment in the interest of the patient, the patient shall be referred for such treatment by a signed order of the clinic. All such treatment shall be given by the radiologist or hospital without charge to the patient, but the patient must pay for any other accommodation provided by the hospital.

(12) Payments to radiologists and hospital for x-ray and/or radium treatments shall be made by the Department only for those cases in which orders for such treatment have been signed by a member of the Cancer Diagnostic Clinic.

(13) If, in the opinion of the members of the Cancer Diagnostic Clinic, the condition of the patient is incurable, x-ray and/or radium treatments will not be given.

(14) It is not intended that the clinic should interfere in any way with the right of any individual physician to treat his own patient, but if the physician wishes to avail himself of the services of the clinic, the patient must be referred to and pass through the clinic in the regular way.

(15) Only those patients who have passed through the clinic shall be eligible for free treatment by x-ray and/or radium.

(16) When surgery has been recommended as being the treatment in the best interest of the patient it is provided free, and if the patient declines to accept the recommendations of the clinic in this regard, but desires x-ray and/or radium treatment, the cost of such treatment will not be assumed by the Department.

(17) The Department does not assume any responsibility for hospitalization or transportation charges incurred by patients in coming to the Diagnostic Clinics.

Hon. Dr. W. W. Cross  
Minister of Health.

### Music Club Held

The Music Club held their meeting on November 1st at the home of Mrs. Marie Strong with Dorothy Strong assisting. The rooms were very pretty, being decorated for Halloween.

The meeting opened by singing "Keep the Home Fires Burning."

The roll was called and the minutes read and approved. Mrs. Marie Matkin was voted in again as a member of the club.

Mrs. Elmore Hudson gave a very interesting talk and instructions on the use of a Baton.

Mrs. Louis Brandley was the guest speaker for the evening and gave a very interesting and delightful talk on "Decorating the Hills".

The club then practised a song to be sung at Relief Society Conference "A Hymn in the Heart of the Hills".

The next meeting will be in the form of a Xmas party and will be held at the home of Muriel Terry.

The meeting was adjourned by Dora Thompson and a delightful lunch was served.

### Clary Settell

Clary Settell, who brings the same undiminished enthusiasm to his radio sports commentaries as he did to the field and the hockey cushion when he was a boy, is known from coast to coast and far south of the border as "The Old Observer."

He is heard across Canada every Saturday night on the CBC National Network at 6:00 p.m.

In between his make talks, Clary is busily giving his attention to the events and personalities in every field of sport. He is regarded as one of the oracles among the non-professionals. Much of his fame is due to a distinctly informal and original phraseology.

Leo Brewerton was a business visitor in Cardston Friday afternoon.

Mr. and Mrs. R. W. Salmon and family spent the week end with relatives in Raymond. Bob is stationed in Vulcan, Alta.

Flt. Lieut. Ewart was a Raymond visitor Monday night and inspected the local Air Cadet Troop in its regular parade.

This year our local Air Cadets will receive a great coat as part of their clothing issue. The coats are the Air Force blue coats and will make a fine addition to the uniforms of the boys.

The local Air Cadet Troop still has room for a few members. If you are in the age group and could take this training, it would be a decided benefit to you throughout life.

C. W. Brewerton, father of Geo. Lee and Gordon, the latter of Cardston, has been in the Cardston Hospital for ten days during which time he has been quite ill. He was reported as feeling somewhat better Thursday night.

### JOIN THE AIR CADETS NOW

There was no school Friday as teachers were at the District Teachers Convention in Lethbridge.

A. C. Ryan of Robinson, Little Co. Ltd., was a visitor at the Raymond Mercantile on Friday.

Architect Victor Meach was in Raymond Monday evening and gave the O. K. to the repair work at the Public School done by T. K. Roberts and his crew. School was Tuesday and Wednesday and then dismissed for the week because of Armistice Day and Teachers Convention.

The M.I.A. of the 2nd Ward is holding a Ward Fair next Tuesday evening. Proceeds of the evening will be used to finance "Era" subscriptions for the men and women of that ward in the Armed Forces. Here is a chance to assist in a good cause and at the same time have a really good time. See the bills and then plan to be there.

### THE COAL MINERS

Coal Mining is hard, dirty and dangerous work. It is a job that few of us in other occupations would care to work at. In that respect there must be a degree of popular sympathy for the cause of those who labor in the mines.

But the coal miners of this country have gained sympathy by the actions of their unions in recent months. They know that there is a coal shortage and the requirements of war depend to a considerable extent on expanding production.

If German armies were marching across Canada, as they did in Russia, there would be no coal strikes. There are none in Russia. And the Germans might be here if it was not for Russia and the British.

The coal miners of Alberta are paid over three times what the miners in Wales receive and probably five or six times the pay of Russian miners.

There has been a great deal of public sympathy felt for coal miners in this country. If they irritate popular feeling beyond all reason the reaction in the years ahead may have surprising and painful results.—Brooks Bulletin.

### THE SECRET OF ADVERTISING

Advertising may be likened to the limb of a tree—when the sap ceases to flow through the branches, it soon breaks and falls off. So, with insincere advertising, it soon drops away. Sincerity comes from the heart intelligent and effective advertising from the mind.

Repetition is reputation. Every advertiser should remember that. The first thing in advertising is repetition. That is what establishes the value of the newspaper as an advertising medium.

Brevity makes the most powerful advertisement. The least the advertiser says the more the mind of the reader thinks. And there is another advantage of brevity—words that are printed are paid for, while words a man thinks, you do not pay for.

Five things are essential to every advertisement: the public must be made to see it, read it, understand it, believe it and want it.

The first advertisement ever published was one in color, and it can never be improved upon. It was the rainbow and was put in the heavens to advertise to the world that it would not again be destroyed by a flood. And, like all good advertisements, it kept its promise.—Brooks Bulletin.

### FARM FOR VICTORY AGRICULTURAL EDUCATION

Adult education has become popular in the last few years and one of the most popular forms has been the gathering of practical information dealing with ones' vocation. Farmers have probably used this type of education more than any other group.

Winter is the time when farmers usually have a few spare moments which they can turn to increasing their knowledge. With the approach of the winter of 1943-44, a series of educational meetings are being planned for the districts of Southern Alberta. The Extension Service of the Department of Agriculture through the District Agriculturists arranges these meetings. The subject matter and the kind of meetings depends largely upon the demands of the district. The District Agriculturist makes a request for the kind of meetings he thinks his district want. If farmers in Southern Alberta will make their requests known to the District Agriculturist, they will be in a

better position to arrange meetings for this winter. Such programs as the following might be arranged:

A short course in the repair of farm machinery; meetings dealing with poultry production, swine production or cattle production; general information meetings and meetings on home economics for the ladies. Speakers who are specialists in their particular line can be obtained in several different fields. If you are interested in any such meetings, please make your wishes known to your district agriculturist. If you belong to some local organization, which would sponsor a series of meetings or short courses, have them write to the District Agriculturist.

### AVOID SHIPPING DISEASE

Shipping fever, or Hemorrhagic Septicemia, in cattle which go into the feed loads, is a cause of heavy losses in Western Canada. This loss can be almost completely avoided if the cattle are vaccinated for the disease in proper time.

The disease is caused by a germ and spreads from one animal to another, but outbreaks do not usually occur unless environmental conditions are unfavorable and lower the resistance of the cattle. Cattle subject to sudden changes of temperatures, wet and droughts are often affected. Thus cattle being shipped often take the disease.

The disease can be avoided by keeping favourable conditions under which the cattle live. Dry, clean yards and protection from winds will help greatly. Feed bunks and water troughs should be kept clean. Any cattle showing symptoms of the disease should be removed from the others. However, the best method of avoiding the disease is to vaccinate the cattle early in the fall, thus giving them resistance to the disease. If cattle are being shipped, they should be vaccinated ten days before shipping. Vaccine can be purchased from drug stores and can be administered by any

stock man.  
W. R. Hanson  
District Agriculturist

Pte. Melvin Anderson of the Canadian Army was a Raymond visitor this week on leave from his post in Calgary.

### SPECIAL AREAS CHAIRMAN

Appointment of Morgan Baldwin as chairman of the Special Areas Board has just been announced by Hon. N. E. Tanner, Minister of Lands and Mines. Mr. Baldwin takes over the position from Mr. A. C. McCully who resigned a short time ago. Mr. Baldwin has been a resident of the district administered by the Special Areas Board for some time. He has been active on the municipal council and was president of the school division. The office of Special Areas Board will remain in Hanna.

### ALFALFA—SOIL—CLIMATE

(Experimental Farms News)

Where the climatic conditions are favourable alfalfa thrives on soils varying in texture from coarse sand and gravel to heavy compact clays, although the best soil is a deep porous loam. It will not do well on poorly drained land or on soils that are notably acid, states John M. Armstrong, Division of Forage Plants, Central Experimental Farm, Ottawa. These limitations can be overcome to a certain extent by choosing the better drained fields on the farm and by reducing soil acidity with applications of lime, though in common with other legumes alfalfa can obtain its nitrogen supply from the air by the action of nitrogen-fixing bacteria in the root nodules, it does require an ample supply of mineral nutrients such as lime, phosphorus, potassium and sulphur in order to produce high yields.

With the winter-hardy varieties now available alfalfa may be grown in practically every mixed-farming area in Canada. The long branching tap root of the plant affords it considerable resistance to drought. It is true that in extremely dry areas

### Sawfly Resistant Wheat

In a recent issue, we stated: "... it remains to combine sawfly resistance with the many other qualities we demand in hard red spring wheat. This is almost certain to be a more difficult task than was the defeat of stem rust." A few days later we learned, in conversation with Mr. L. B. Thomson, Superintendent, Dominion Experimental Station, Swift Current, that there was reason to expect the distribution of sawfly resistant varieties within a few years. So we wrote to Mr. A. W. Platt, by whom the breeding work has been done, asking for a summary of his experimental work. The following paragraphs are derived, chiefly, from the report kindly prepared by Mr. Platt.

Several years ago, Mr. H. J. Kemp obtained some bread wheats from New Zealand which had solid stems. These wheats, while resistant to sawfly, had poor baking quality, were susceptible to stem rust, leaf rust and stinking smut, and shatter freely. They were crossed with Renown, Thatcher, and Apex in the hope of securing hybrids which would possess sawfly resistance plus the desirable characteristics of our rust resistant varieties. The second and third generation hybrid populations contained every conceivable combination of desirable and undesirable characteristics. They were exposed to stem rust, stinking smut, sawfly and drought at several stations in the prairie provinces. Data have also been assembled on yield, strength of straw, milling and baking, etc. The vast majority of hybrid strains fell by the wayside; but a few performed well enough to be considered for increase and distribution. Final judgment must await further tests.

Ask a line elevator agent for a printed leaflet giving a more extensive account of this work.

while it may survive its productivity is reduced. Nevertheless, it has been demonstrated that in these areas where the run off water can be conserved by dams and used for irrigation, the growing of alfalfa provides the best possible insurance against a feed shortage.

A frequent difficulty in growing alfalfa in the Maritime Provinces and to some extent in Ontario and Quebec is the injury to stand through the formation of ice sheets on the fields in winter. This form of injury is apparently due to smothering and is distinct from injury caused by low temperatures and inadequate snow cover. Varieties differ in their resistance to the latter type of injury but all appear to be equally susceptible to injury from ice sheets.

## How we can all help in this

● This winter, every home-owner is urged to conserve coal—to save at least one ton in five. And here's what YOU can do—

### WINTERIZE YOUR HOME NOW

Save valuable heat by weatherstripping and caulking your doors and windows. Put up your storm windows early—and insulate wherever necessary.

### CHECK THESE FUEL-SAVING TIPS

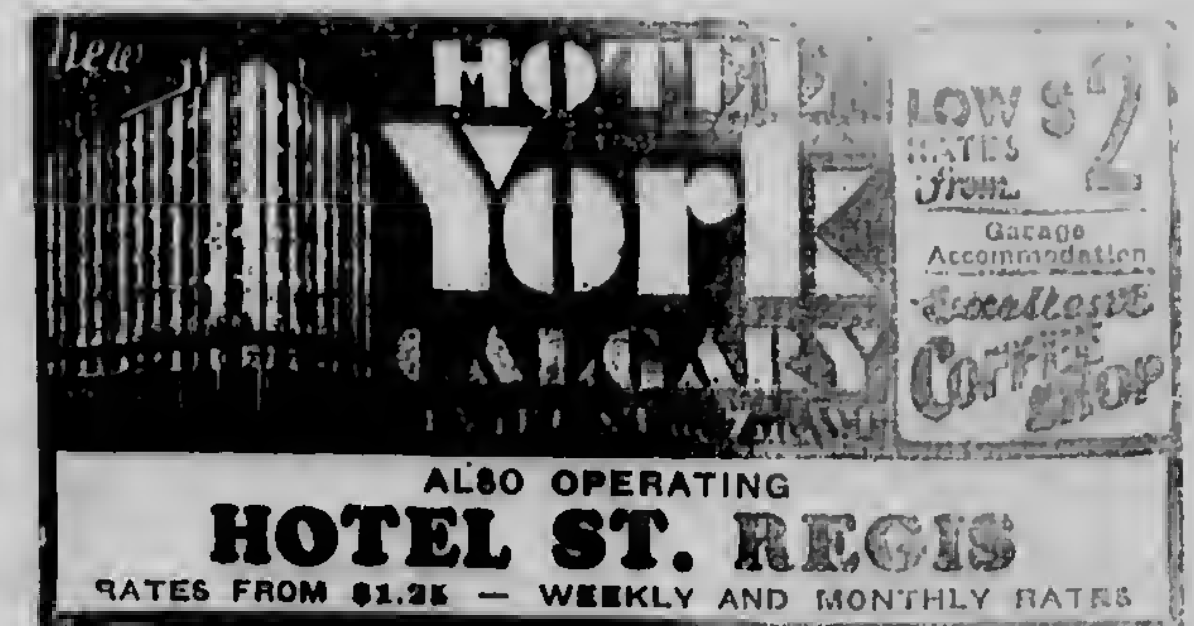

Have your furnace and pipes thoroughly cleaned. Use efficient firing methods. Avoid house temperatures higher than 68 degrees in daytime, and 58 degrees in sleeping hours. Dress more warmly.

Save one ton in five

### Men, 30, 40, 50!

## The Course to Follow

Grain congestion is very severe at the present time. The small initial wheat delivery quota amply demonstrates the truth of this statement.

In face of such conditions it is difficult for farmers to direct their limited quotas to the elevators of their choice, which in most cases is the Pool Elevators. The Pool Elevator system acknowledges that the problem is a complicated one. To tell the farmers to deliver all their grain to Pool elevators when space is so limited is simply not common sense.

But the Wheat Pool does suggest that if farmers have any selection in the matter the Pool elevators should get the preference. Furthermore, if you are compelled by unavoidable circumstances to deliver your grain elsewhere, do not forget that you should return to Pool elevators whenever the situation clears up and the congestion is relieved.

#### BRITISH MINISTER PRAISES DRIED EGGS

"The general excellence as revealed by the flavor score is indeed a matter of satisfaction and reflects close care and supervision" the British Minister of Food stated recently, in commenting on the quality of Canadian dried eggs exported to Britain.

Nearly 10 million pounds of Canadian egg powder have been shipped to Britain from Canada by the Special Products Board during the first eight months of 1943.

#### FEET, DO YO' STUFF!

Two colored boys were having an argument about ghosts. One of them claimed to have seen a ghost the night before.

"What was dis here ghos' doin' when you las' seen him?" asked the doubting one.

"Jes' fallin' behind, mistah; fallin' behind rapid."

#### THE WEED PROBLEM IN ALBERTA

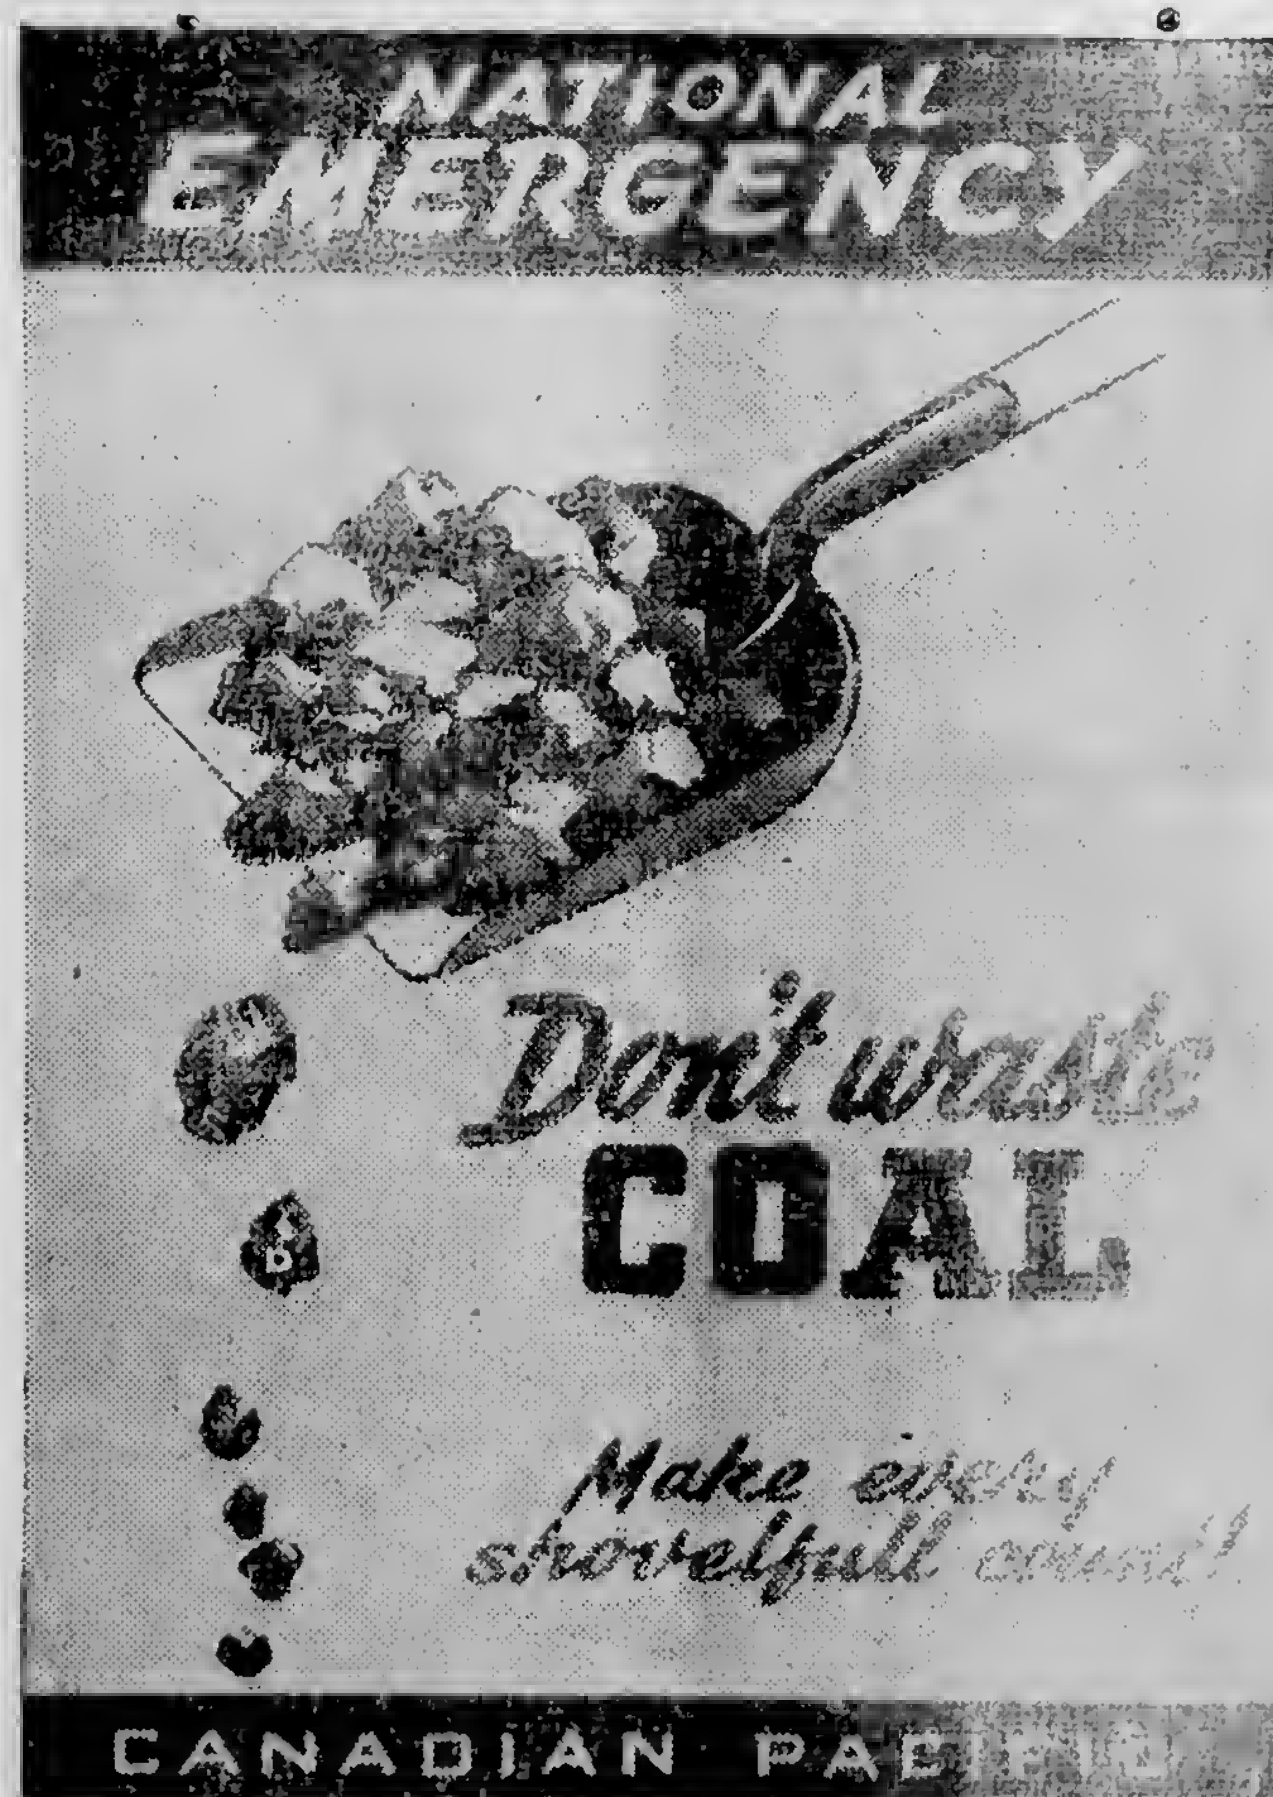

It is impossible to give actual figures on the losses due to weeds says H. J. Mather, Supervisor of Weed Control, because of the many ways in which they affect agricultural incomes. However, a considerable amount of work has been done on this subject and the results obtained are interesting.

A three year study conducted by the Department of Agriculture in Saskatchewan on land of average infestation shows a loss from weeds of 25 p.c. in the yield of wheat. The Associated Councils on Weed Control states that the loss in 1932 on yield alone in the three Prairie Provinces amounted to over 40,000,000 dollars based on prices prevailing at that time. Costs of production are increasing because of extra handling charges. Also the expense of installing and operating cleaning machinery and additional transportation charges are costs attributable to weeds. Land values are seriously affected by the presence of weeds since the productive capacity of the farm may be largely determined by them.

In spite of these tremendous losses it is generally agreed at the present time that our weed population is increasing and that losses are increasing. To many people look upon the weed problem as a problem apart from their ordinary farm program, not as something to be considered in their plan of operation. Because of this attitude the issue is avoided at a time when it could be handled economically, with the result that eventually a point is reached where the income from the farm is so seriously affected that it no longer returns sufficient to pay costs of operation. This problem can not be isolated and dealt with separately. More attention should be given to competitive crops and cropping practices. Certain crops are much better competitors with weeds than others, and some rotations permit cultivation at critical periods in the life cycle of the weeds to be eradicated.

"Good farming" is the best answer to our weed problem and this "good farming" implies a thorough study of the weed infestation on the farm and the laying out of a program of cropping which will take advantage of every available means to reduce it.

JOIN THE AIR CADETS NOW

PART of the Canadian Pacific Railway's campaign for rigid conservation of coal during this heating season is a special booklet of instructions, the front cover of which is illustrated above and which all those immediately responsible for handling company coal must follow. Supplementing the booklet a general appeal on home saving possible has gone to the almost 70,000 employees of the company and the subject will be kept alive by a continuing intracompany educational series. All phases of the campaign, announced by W. M. Neal, the vice-president, are expected to save 500,000 tons of coal throughout the system itself, with the home savings by Canadian Pacific people expected to add considerably even to that impressive figure. The company saving will be 10 per cent. on the approximate 5,000,000 tons of coal required annually—a remarkable saving, when considered in the light of the Canadian Pacific's own conservation campaign to increase operating efficiency, which has been intensively pursued for 10 years.

Commission gives them a definite answer on their demands for a wage increase.

A greater proportion of Canadian Army officers now come from candidates with Overseas service, some of whom will be trained in England, some in Canada.

Armistice Day was observed quietly here, stores and offices being closed up for the day. A large crowd attended the Vets dance at night where Cody's seven played and there was also a crowded house at the Capital Theatre for the holiday picture. The weather was beautiful and warm all day.
